Aim: The main objective of the EMWG is to re-establish an appreciation of the value of electron microscopy in diagnosis and research in pathology. It would promote understanding the nature of pathological lesions or conditions, and improve diagnostic accuracy. This would be achieved primarily through the organisation of meetings for the discussion of current ideas and interpretations in electron microscopy. It might also be worth establishing a database of individuals in Europe with a specialist expertise in ultrastructural pathology to promote communication in general, and to enable non-specialists to seek advice from experts.

Agenda of upcoming events

Next Congresses:

22nd European Congress of Pathology, September 4-9 2009, Florence, Italy
