THE EUROPEAN SOCIETY OF PATHOLOGY (ESP)

Title: Recent Advances and Updates in Histopathology

Saturday, February 29, 2020
7:00 PM – 10:00 PM

Moderators:
Holger Moch, MD, PhD, University Hospital Zürich, Zürich, Switzerland
Dina Tiniakos, MD, PhD, Aretaieion Hospital, National & Kapodistrian University of Athens, Athens, Greece and Translational and Clinical Research Institute, Newcastle University, Newcastle upon Tyne, UK

Course Description:
The 2nd European Society of Pathology Companion Meeting will highlight recent developments and updates in histopathology of head and neck, breast, renal cancer, neuroendocrine neoplasms, soft tissue sarcoma and different types of thyroiditis. The selected topics will be presented by expert faculty with diagnostic and research expertise in these fields. Although characterization and classification of many tumors via the well-established histomorphology remains the gold standard in the interpretation of such diseases, the use of new diagnostic algorithms and integration of molecular genetics in diagnosis have an essential role in unraveling diagnostic and research challenges. This close bond has a substantial impact on characterizing disease entities, improving diagnostic accuracy, identifying molecular predictive and prognostic markers and discovery and validation of novel therapeutic molecular targets.

Learning Objectives:
Upon completion of this educational activity, the learner will be able to:

- Appreciate the impact of human papilloma viruses and translocations on the prognosis of head and neck cancers, particularly those of the oropharynx and sinonasal tract, and the potential implications for patient management.
- Define the histomorphological and immunophenotypic features of Ductal carcinoma in situ (DCIS) and their impact on disease recurrence and progression and surgical and clinical management. Integration and use of molecular tests will be discussed.
- Recognize the commonalities and differences of neuroendocrine neoplasms
- Describe criteria and diagnostic algorithms how to classify different types of thyroiditis in a clinically relevant way and understand the clinical–morphologic correlation in pathogenesis of thyroid inflammations.
- Recognize how and when to integrate molecular genetics in sarcoma diagnostics.
- Approach oncocytes neoplasms in the kidney

**Target Audience:** This course is suitable for residents in pathology, attending pathologists, and is also appropriate for biomedical scientists involved in the field of pathology.

**Business Meeting:** The ESP plans to organise a business meeting following the course
